BIOGRAPHY SERIES: GREAT MINDS CD ROM

Discover the most brilliant thinkers of all time.

Great Minds brings you the most brilliant thinkers of all time—the inventors, the scientists, and the intellectuals whose ideas have moved the world since the dawn of civilization. They're the people who made the discoveries that have shaped everyday life, from ancient Greece to the 21st century. Whether it's the radio you listen to every morning, what you know about human evolution, or the steps you take to avoid cholesterol and cancer, they are all the result of someone's perseverance and insight. Come and meet them here.

This comprehensive CD-ROM is packed with over 2,500 biography articles covering Aristotle, Marie Curie, Guglielmo Marconi, Louis Pasteur, and many more. There are also featured articles on a variety of subjects, including biology, medicine, the Nobel Prize, and oceanography. Engaging multimedia plus hundreds of photos and tables enhance the articles and bring topics to life. Packed with knowledge, this CD is the perfect way to get to know the great minds of our world.

Insightful Biographies

1,850 articles from the *Encyclopædia Britannica* and the *Britannica Book of the Year* provide you an impressive list of the great thinkers who have shaped our world. Discover the life and contributions of Aristotle, Jaques-Yves Cousteau, Marie Curie, Charles Darwin, Joycelyn Elders, Stephen Hawking, Guglielmo Marconi, Alfred Nobel, Nostradamus, Benjamin Spock, and many others.

Broad Coverage

11 non-biographical Featured Articles on a range of subjects give you added information on many fascinating topics.

Interactive Subject Browse

With over 2,500 article entries in the Subject Browse (some articles appear in more than one subject), you can easily find the people relevant to your topic of choice. Subjects include astronomers, biologists, chemists, climatologists, geologists, mathematicians, meteorologists, oceanographers, physicists, physiologists/medicine, Nobel Prize winners, and featured articles.

Engaging Multimedia

With nearly 700 photos, illustrations, tables, and other images, this CD is as visually pleasing as it is informative. Plus maps, video clips, and animations enhance learning and complement the article content.

Merriam-Webster's Collegiate® Dictionary and Thesaurus With 225,000 definitions, *Merriam-Webster's Collegiate Dictionary* is sure to answer your questions about unfamiliar terms. Plus, 50,000 thesaurus entries provide all the word-help you will need to understand each article.

Enhanced Learning Tools

Use the Article Export tool to set aside articles for further examination, or use the bookmarking function to save favorite articles. Further your learning with the use of Virtual Note-cards and the Notes Viewer to take and save notes on a particular article.

M.R.P: Rs.399/- (Inclusive of all taxes).

BIOGRAPHY SERIES: HEROES AND VILLAINS CD ROM

Gangsters, Humanitarians, Pioneers, Traitors and other Intriguing Figures

Encyclopædia Britannica profiles the gangsters, humanitarians, pioneers, pirates, politicians, traitors, and other interesting figures who have left their mark on history. Judge for yourself who is a hero and who is a villain. With over 600 articles covering notable lives from serial killers and spies to Nobel Peace Prize winners and revolutionaries, this comprehensive CD will leave you entertained for hours. The line between good and bad is not always a clear one, and the popular tales are not always the most accurate. Hundreds of lives are portrayed in this eye-opening look at the world's historic heroes and villains.

Detailed and Balanced Biographies

Explore the lives of Gerry Adams, Kofi Annan, Billy the Kid, Osama bin Laden, the Boston Strangler, Fidel Castro, Julius Caesar, Christopher Columbus, John Gotti, Adolf Hitler, Sherlock Holmes, Judas Iscariot, Michael Jordan, Helen Keller, Popeye, Eleanor Roosevelt, Harriet Tubman, Woodrow Wilson, and many others.

Convenient Subject Browse

Sift through famous people from the topic of your choice. Subjects include activists, athletes, gangsters, humanitarians & philanthropists, legendary figures, militants & revolutionaries, Nobel Peace Prize laureates, pioneers & explorers, pirates, outlaws, & frontiersmen, political & military figures, serial killers & murderers, and traitors & spies.

EARTH & NATURE: SPACE CD ROM

Discover Astronomy and Space Exploration

What lies out there in the distance? And what lies beyond? How did it all begin? Are we alone in this vast universe? These questions have occupied human beings throughout history and continue to do so today. The **Touch the Sky, Touch the Universe** program invites you to "touch" the heavenly bodies and learn of worlds that are different from, yet very much the same as, our planet Earth.

You will learn about the origin of the universe, the development of galaxies, various processes in the solar system, and the birth and death of stars. In the learning environment, you will also have an opportunity to "touch" the technology and scientific research that have accompanied space travel from its earliest days, as well as to join an effort that is common to us all - the attempt to decipher the riddle of the universe.

With its combination of an extensive knowledge base which includes the planets of our solar system, the sun, galaxies, constellations, stars, and the universe with project-oriented investigations and provocative ideas for creative writing, the **Touch the Sky, Touch the Universe** program provides a focused, interactive environment

for exploring phenomena in the universe.

The rationale

The rich learning environment of **Touch the Sky, Touch the Universe** is aimed at providing Middle and High School students and other interested individuals with the skills associated with gaining knowledge about the universe, galaxies, solar systems, planets and their satellites. The knowledge base of the program concentrates on seven major themes that are inherent in a study of the universe: **The Big Bang theory, Universality of the Laws of Physics, Organization of the Universe, Scale and Measurement, Changing locations of Celestial Bodies, Evolution of scientific theories, and Earth.**

The objectives of the program are:

- To provide students with the skills associated with dealing with different concepts of time - a year, a month, a day, and becoming acquainted with the relationship between our concepts of time and the motion of objects in the universe.
- Help students achieve an understanding of the theories and models of space phenomena.
- The students will learn about the location in space of various types of objects, and the hierarchy of structures in the universe.
- To provide students with the skills of dealing with large units of measurement - scales of distance: the light year and the astronomical unit.

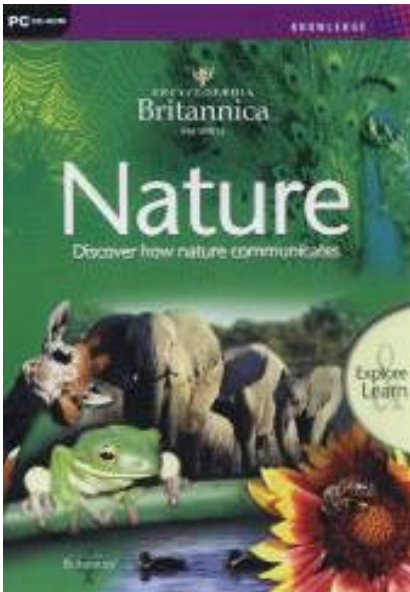

Highlights

- A rich multimedia knowledge base about the universe, the bodies in it, tools used in studying them, and the highlights of astronomical research past and present.
- 36 entries presented in the form of written text, narration, photographs, sounds, animated sequences, and full-screen video segments.
- Research projects, Internet-based activities, and writing assignments that focus on the information presented in the program.

- Direct access to external productivity tools -- a word processor, a drawing program, presentation software, and a spreadsheet.
- Direct links to related Internet sites.

M.R.P: Rs. 399/- (Inclusive of Taxes).

EARTH & NATURE: NATURE CD ROM

Discover How Nature Communicates

What does a firefly, as it lights up in the dark, have in common with a pleasantly scented flower in a field or a colourful fish in a coral reef? How does a male peacock that is spreading its tail in front of a female resemble a frog that is puffing up its throat and croaking in a bog? These plants and animals are all getting across a message! In **The Wonderful Language of Nature**, you will discover amazing ways in which plants and animals communicate.

The Wonderful Language of Nature's knowledge base contains photographs, animated sequences, full-screen video, narrated text, and hypermedia that provide information on nearly 100 different plant and animal species, including humans. Combined with project-oriented investigations, facilities for customizing the information in the program, access to productivity tools, and direct links to related Internet sites, **The Wonderful Language of Nature** offers a focused, interactive environment for exploring natural phenomena.

The rationale

The Wonderful Language of Nature is developed to enable Middle and High School students and other interested individuals learn about the different aspects of communication in nature. The knowledge base of this program is organized around seven topics: Courtship and Attraction, In Search of Food, Parents and Offspring, Social Standing, Territorial Dominance, Defence, and Group Identity.

The objectives of this program are:

- Understanding the various aspects of communications in nature: visual, vocal, and chemical.
- Recognizing and analysing the various forms of communication in nature.
- Understanding communication as a means of survival in nature.

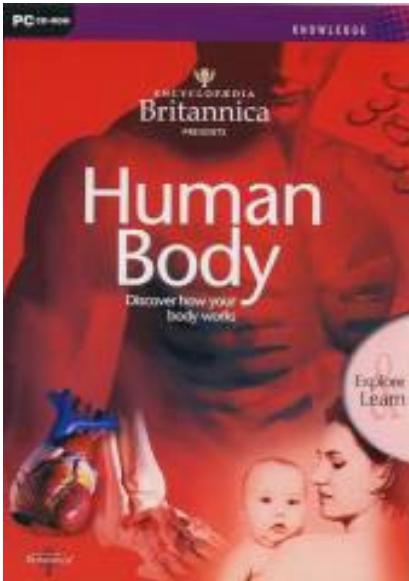

Highlights

- A multimedia knowledge base about the diverse kinds of communication in nature.
- Narrations, photographs, audio visual elements, animated sequences, and slide shows to make learning fun.
- Research and problem-solving activities that focus on the information presented in the program.
- An electronic glossary to provide definitions of relevant terms and concepts.
- Direct access to external productivity tools -- a word processor, a drawing program, presentation software, and a spreadsheet.
- Facilities for customizing the program's information.
- Direct links to related Internet sites.

M.R.P: Rs. 399/- (Inclusive of Taxes).

EARTH & NATURE: HUMAN BODY CD ROM

Discover How your Body Works

Chatting and laughing with friends, eating a dish of macaroni and cheese, seeing the colors of spring blossoms, and smelling their fragrance -- what do all these activities have in common? They involve the life processes that are constantly going on in the human body. In the **My Body, Myself** program, you will discover how people grow and develop, receive information from the environment, make their muscles move, obtain energy from food, transport materials within their body, and combat disease. The program presents a virtual museum with interactive exhibits and information in the form of photographs, full-screen video, narrated text, and 3-D models and simulations, including an exciting virtual journey through the circulatory system.

Combining these exhibits with project-oriented investigations, facilities for customizing the program's information, access to productivity tools, and direct links to related Internet sites, **My Body, Myself** offers a focused, interactive environment for exploring the health, structure, and processes of the human body.

The rationale

The program is developed to enable students, between ten and fifteen years of age, learn about the different life processes. **My Body, Myself** is organized to illustrate and explain the bodily functions of human beings. This program uniquely combines health issues, medical technology, historical events in medicine, and biological information. The knowledge base is organized around six topics: Growth and Development, Energy, Defence, Circulation, Information Processing, and Movement.

The objectives of this program are:

- The students will acquire scientific knowledge about human biology, health issues, and medical technology.
- The students will have an understanding of man's ability to affect his health and enhance the quality of his life.
- The students will gather information from a multimedia database, use this information for personal tasks, and explore the Internet for additional information.
- The students will organize information, process it, and derive conclusions from it.

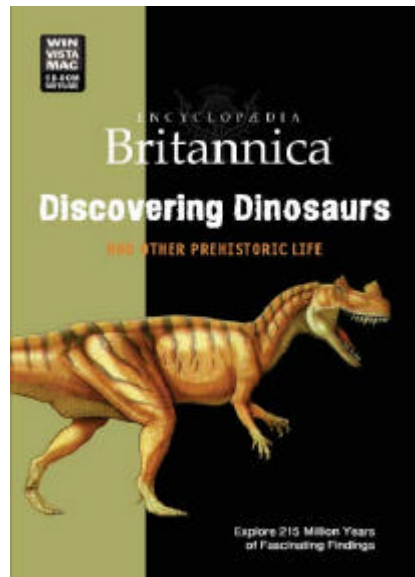

Highlights

- A rich learning environment that offers exhaustive information on the structure and processes of the human body.
- A virtual museum with multimedia knowledge base including narrations, photographs, diagrams, audio visual elements, animated sequences, and slide shows.
- An activity centre that provides investigation ideas and tools for producing projects.
- An electronic glossary and a medical lexicon provide definitions of relevant terms and concepts.
- Direct access to external productivity tools -- a word processor, a drawing program, presentation software, and a spreadsheet.
- Facilities for customizing the program's information.
- Direct links to related Internet sites.

EARTH & NATURE: ZOOK – DISCOVER THE SEASONS CD ROM

ZOOK – THE STORY

After crossing the Milky way on his magic flying board, Zook, the little space robot, has arrived on planet Earth. He lands in a magic forest, where he finds the inhabitants getting ready to celebrate their big festival of the seasons. Zook knows nothing about this new planet, so different from his own, and he doesn't know what the seasons are either. Luckily the forest is home to a number of funny and charming characters who are happy to explain everything a young robot needs to know about the four seasons on the Earth.

ZOOK....THE ADVENTURE

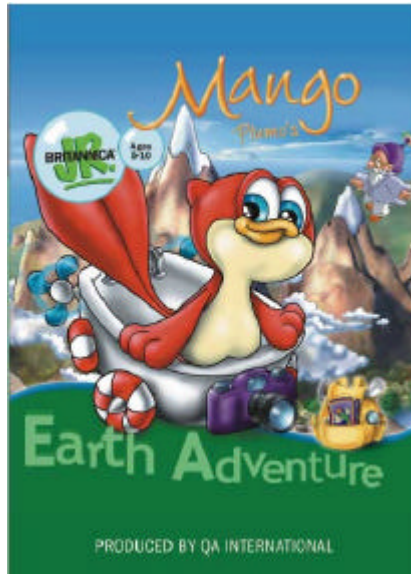

The adventure with Zook starts in summer and ends in spring. Each season (summer, autumn, winter, and spring) has its own unique panoramic environment to be explored. Along the way, you will discover a number of funny animated characters, some of which come with a simple scientific information. For each season visited, you must correctly follow zook's instructions before moving on to the next season. Once you have successfully completed all the challenges for the four seasons, you can join in the big festival. Afterward, you may return to visit the forest.

ZOOK ...THE GAMES

The Zook Discovers the seasons CD-ROM offers four amusing games, once for each season. These games challenge the memory, logic, powers of observation, and skills of the player. Each games has three levels of difficulty.
